Key features

Higher throughput

- One cartridge is used to process an entire Cord Blood Unit
- All volumes of cord blood can be accommodated with no up-front manipulation
- Lower cell count units can be processed

Faster processing time

- Start to finish processing takes 2 hours
- Up to 3X more cord blood units can be processed/day
- Multiple units can be processed at once

Less resources

- Simplified process can be performed with less operators
- Magnetic Separation process does not require a BSC
- Efficiently process more units per day, decreasing additional overhead
